COMPANY PROFILE

OUR GOAL  
IS ALWAYS  
TO GO ONE STEP  
AHEAD OF OUR  
CUSTOMERS' NEEDS

## In evolution since 1979

Maseto Technologies is a pioneering company in the manufacture of machinery for nuts and sesame seed treatment. From its foundation in 1979 it has concentrated all its energy in two fundamental main goals:

- Permanent investigation to offer efficient and lasting machines.
- Provision of the best and fastest customer service.

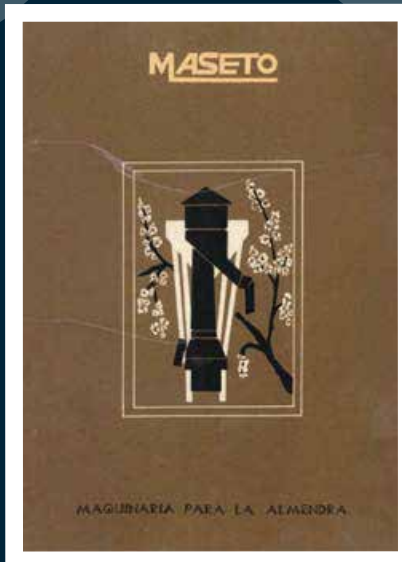

The achievement of these goals has allowed us to create a solid brand image in the national market, as well as in the international one.

Thanks to the excellent quality of our machinery, Maseto Technologies has gained the fidelity and the confidence of its customers, being distributed in more than 50 countries.

Nowadays, thanks to the incorporation of new technological advances, Maseto Technologies continues improving the efficiency of its machines and creating innovative designs, in order to move forward towards the future changes of the sector.

MORE THAN  
**50** years  
of evolution  
and experience

## The beginnings

Mr. Manuel Seva Toledo started his professional career as a carpenter in the company Tomás y Berenguer, placed in Alicante, which manufactured machinery for the milling sector.

1960

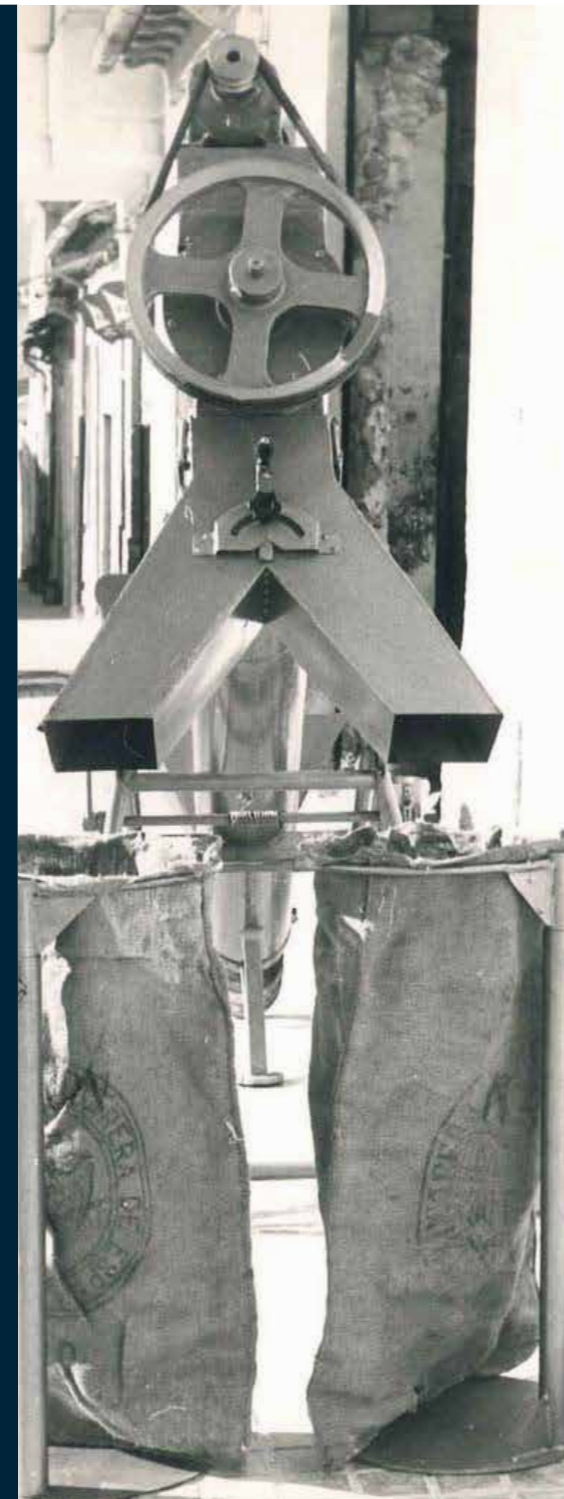

When Tomás y Berenguer closed down, Mr. Manuel continued repairing machines to start, so time later, with the help of a few employees manufacturing them. They were made in wood and were sold under orders of local companies of the milling sector, that worked with nougat candy or "turrón", and nuts. In these companies the installation of hoppers, sieves and transport systems, constituted the basis on which the company Maseto was created.

1964

Innovative machines, like the almond peeler or the pneumatic separator, are created. These, thanks to its great efficiency and quality, continue to be manufactured in the present. These creations make Maseto enter the international market. It begins to export to countries such as the United States.

1970

The constant improvement of the processing systems in the nuts sector makes the company extend its commercial influence towards the totality of the national market, increasing its invoicing and personnel hiring. In 1970, the growth of the company makes it possible to carry out new investments and extend its facilities. This year, the company also begins to have the first important contacts with the international market, including the most prestigious Californian companies that supply almond to its main national customers.

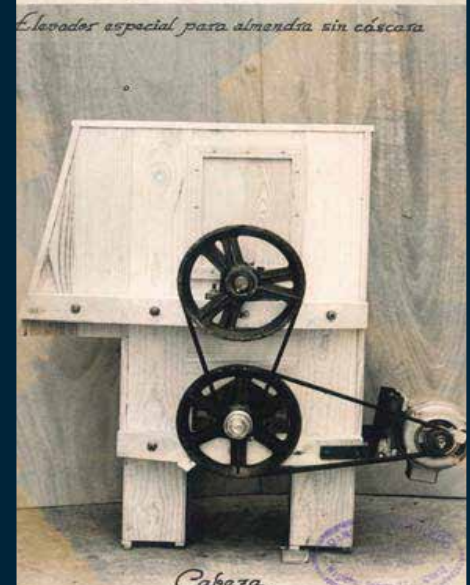

1979

In 1979 Maseto is founded as a limited company, and the brand is registered to honor the name of its founder.

1982

In the full height of consumption of sesame worldwide and due to the lack of modern machinery for its processing, Maseto overturns its technology and knowledge in the development of equipments for the treatment of such product and together with the most experienced processors, introduced in the market the first complete lines of automatic machinery for sesame, obtaining the recognition of all the companies in the sector and patenting their principal machines. This project constitutes an enormous dedication from the totality of the staff, reaching high costs in research and development. Efforts that, nevertheless, were worth it, since they managed to turn Maseto Technologies into the great company that is nowadays. Due to the emerging development of this new area of business in the company and its consequent expansion, a new warehouse is acquired, with more than 10.000 m2, resulting in a great investment destined to sustain the future growth of the company.

The Maseto processing lines and equipment have a wide range of machinery increasingly innovative, capable of giving solutions to the most demanding needs of the market.

### SPECIALIST IN:

Complete lines for processing sesame seed for bakeries.

Complete lines for processing sesame seed for tahini.

Complete lines for blanching almond.

Complete line for processing almond ABC (slices, slivers, halves, cubes and flours)

Treatment processes for peanut, walnut, pistachio, cashew, sunflower seed,...

### OUR MACHINES:

Storage equipment

Transport machinery

Cleaning machinery

Roasters

Dryers

Coolers

Sifters

Peeling machinery

Calibrating machinery

Destoners

Selection benches

Cutting machines

Conditioning machinery

Shelling machines

Weighing systems

Metal detectors

Optical selection machines

Control systems

NG FACTORIES  
HE NEXT LEVEL  
WITH THE  
INDUSTRY 4.0

Maseto believes in research and development for stimulating the growth and the fidelity of all those customers who demand improvements in their processing plants to adapt them to the constant changes of the market.

In the last three years, patents of usefulness have been registered for innovations incorporated in our machines.

The search and selection of the best components and materials, the exhaustive control of the manufacturing process and the work of a highly qualified technical team make possible to obtain a quality product that satisfies the most demanding markets.

MASETO's presence in five continents is the result of its determination for design, the quality of its products and the guarantee of a post-sales service.

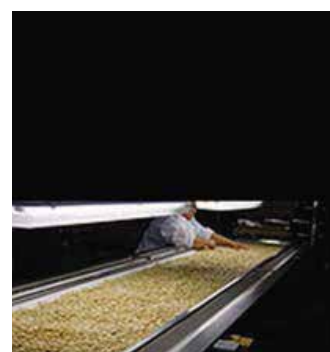

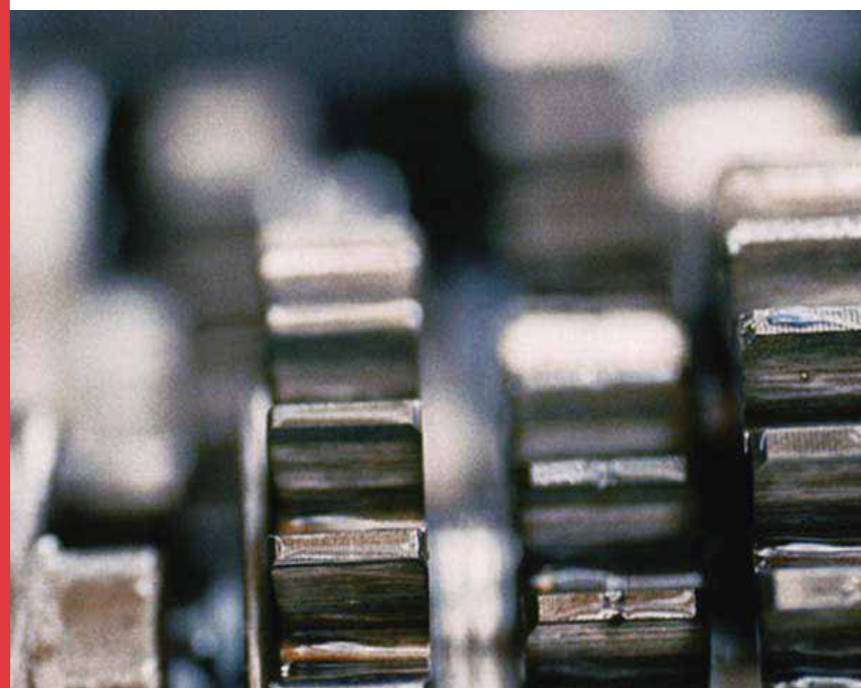

Our Research and Development Department worked in collaboration with four Spanish universities to develop an improvement program in the methods and equipment for the treatment of sesame seed and nuts, especially of the almond, but

also pistachios, nuts, hazelnuts, cashews, etc. This program, besides reforming the processes, took implicitly an important optimization of the energy and water consumption, as well as the treatments of necessary inputs.

Increasingly, more equipment include software for the automation and electronic control of all their parameters, obtaining this way a high performance of the production and exhaustive control of the process by a detailed diagnosis.

MASETO  
IS PRESENT  
IN THE MOST  
IMPORTANT  
COMPANIES  
OF THE  
FIVE CONTINENTS

## MACHINES MANUFACTURED BY EXPERT HANDS, USING THE MOST ADVANCED TECHNOLOGY

Maseto Technologies's machines are made to last and work tirelessly for years.

All the components in the production line are optimized and tested to obtain the maximum precision and efficiency during a long period of useful life.

The high quality of all the components guarantees an optimum operation with minimum maintenance.

Every element of the working chain is the result of the evolution and improvement of the systems and components that have permanently taken place in MASETO from its beginning.

With MASETO machinery you will always count with the guarantee and the support of a great team of professionals provided with the necessary means to give an

immediate response to your needs. Our work does not end with the installation of machinery; it begins at this moment, so you can get the maximum advantage from your investment.

We advise and keep you informed about the advances and improvements that take place in the sector.

In short, you not only acquire machinery for processing your products, but you also acquire a certainty of service, maintenance, and supplies.

The MASETO engineering lines of processes and equipment count with a wide range of machinery increasingly innovative, capable of giving solutions to the most demanding needs of the market.

THE STRUCTURE OF  
OUR FIRM ENABLES US  
TO OBTAIN HIGH  
QUALITY AND  
EXTRAORDINARILY  
PERSONALIZED  
RESULTS

## customized manufacturing

Likewise, the R+D Department of Maseto Technologies, together with other countries' industries, has developed new lines of the final product, like marzipan. Today, the biggest and most modern factory for marzipan mass production in the world was constructed by Maseto Technologies in the north of Italy.

Due to the market's demand and the constant evolution of its technology to satisfy the customer needs, Maseto has introduced in its production high capacity lines that are able to process the double of a product almost in the same space, optimizing, this way, the production and the physical resources.

The new concept of high technology integrates, among others, self-cleaning systems on the machines that, with the modernization of designs and the fulfilment of the strictest international procedure of quality and hygiene, guarantee the treatment of the product with the best quality in the market.

MASETO IS A  
CONSOLIDATED  
COMPANY  
THAT STRIVES TO  
OFFER THE BEST  
TECHNOLOGY AND  
A FINAL PRODUCT  
OF UNBEATABLE  
QUALITY TO ITS  
CUSTOMERS
